

Ogbonna M. Moses, Data Scientist

Lagos, Nigeria • +2349081374422 • Email: mmoses061@gmail.com • Website: moses-martins.github.io

Github: <https://github.com/Moses-Martins> • Medium: <https://medium.com/@mosesmartins>

I am an experienced Data Scientist with a mathematics background. Results-driven and highly motivated, I possess a deep understanding of machine learning and deep learning theories, including convolutional neural networks for object classification and detection. I am passionate about numbers and statistics and enjoy working with data, analyzing it, exploring hidden patterns, and building machine-learning models around them. Enthusiastic about combining my strong technical skill set with domain knowledge to solve business and industrial problems and communicate effectively to stakeholders. I also aim to bring the latest AI advancements into practical implementation.

Professional Experience

RENDA AFRICA

Data Scientist

Hybrid. Lagos, Nigeria

Aug 2024 - present

- Contributed to a high-impact Supply Chain Optimization and Risk Mitigation project, collaborating with clients and partners to ensure alignment and providing valuable insights for solutions.
- Developed clear visualizations to communicate complex operational data, including delivery times, and cost-efficiency metrics.
- Created dashboards with predictive analytics capabilities to display key performance indicators and support data-driven decision making for management.

TUA EVENTS LIMITED

Data Analyst

Hybrid. Lagos, Nigeria

Apr 2024 - Aug 2024

- Analyzed attendees demographics, engagement, and feedback to support strategic decision-making, providing actionable insights for event optimization.
- Identified and presented data-driven opportunities for enhancing event experiences, including suggestions for new features, content, or engagement strategies based on data insights.
- Prepared Comprehensive Event Reports, ensuring they met data standards and effectively highlighted trends, insights, and recommendations.

Mentoriness

Machine Learning (Intern)

Remote. India

May 2024 - Jun 2024

- Processed and analyzed large datasets, including cleaning, transforming, and preparing them for model training.
- Evaluated model performance using metrics such as precision, F1 score, and recommended improvements.
- Documented project processes, models, and code, providing comprehensive documentation for future reference and reproducibility.

- Prepared regular data reports, ensuring compliance with data standards and explaining trends.
- Performed data cleansing and validation, ensuring the integrity of datasets used for analysis.
- Collaborated with teams from different departments to make sure that data was accurate and consistent. I also helped improve how information was gathered and distributed.
- Monitored and analyzed competitors data, providing actionable insights to maintain market competitiveness.
- Assessed data-driven opportunities and presented strategic recommendations.
- Created visualizations and reports to illustrate data insights and support decision-making.

Communities & Volunteering

- Collaborated with team members to gather data from various campus sources and create comprehensive reports on community activities and initiatives.
- Designed and implemented standardized report templates to streamline the reporting process and maintain consistency in format and style.

- Part of the biggest student society in Sub-Saharan Africa, focused on simulating real-world finance. Engaged in activities that bridge the gap between theory and practice, including investment simulations and workshops, enhancing my understanding of financial markets and decision-making.

Education

Certifications

Data Analysis Tech4Dev	Professional Data Scientist DataCamp	Spatial Data Science Esri	Intermediate Machine Learning Kaggle Learn
Accelerating Data Science Workflows NVIDIA Deep Learning Institute		Microsoft Azure Fundamentals Linkedin Learn	
AI Career Essentials ALX Africa	ML Terminologies and Process AWS Training and Certification		Data Analytics with PowerBi DSN X Microsoft

Projects

Wikipedia Data Analysis with Python

Project link [\[click here\]](#)

- Downloaded and processed 50GB of compressed Wikipedia data to extract and analyze book-related articles. The process included data extraction, parsing, and organizing relevant book information from the Wikipedia dump. A total of 40 hours of runtime was utilized to handle the data operations.

DIVERSITY & INCLUSION DASHBOARD

Project link [\[click here\]](#)

- Created a Power BI dashboard focused on diversity and inclusion metrics within the organization. Highlighting key areas, the report provides stakeholders with clear insights into the organization's current diversity landscape and tracks progress over time, supporting informed decision-making.

Swimming Pool Detection Using ArcGIS and Python

Project link [\[click here\]](#)

- A deep learning model using ArcGIS and Python developed to assist local government tax assessors in detecting swimming pools within a specific area. The solution identifies newly constructed or unrecorded pools that influence property valuations. This approach improves the accuracy of property assessments and reduces reliance on manual surveys. The project aims to help assessors adjust property values and taxes more effectively, potentially increasing community revenue. Python was used for data preprocessing, model training, and integration with ArcGIS tools.
